

PROTECT YOUR FAMILY AND COMMUNITY:

HOW ZIKA SPREADS

Most people get Zika from a mosquito bite

More members in the community become infected

A mosquito bites a person infected with Zika virus

The mosquito becomes infected

A mosquito will often live in a single house during its lifetime

More mosquitoes get infected and spread the virus

The infected mosquito bites a family member or neighbor and infects them

Other, less common ways, people get Zika:

During pregnancy

A pregnant woman can pass Zika virus to her fetus during pregnancy. Zika causes microcephaly, a severe birth defect that is a sign of incomplete brain development

Through sex

Zika virus can be sexually transmitted by a man to his partners

Through blood transfusion

There is a strong possibility that Zika virus can be spread through blood transfusions
